Application/Control Number: 09/654,101

Art Unit: 2671

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claims 1-20, 36-38, and 56-75 are rejected under 35 U.S.C. 103(a) as being unpatentable over MADRANDE (6,573,907).

As per claim 1, and similar claims 36, 56, Madrande teaches the claimed "method of processing data" (Madrande, figure 12) comprising:

"receiving plural sets of data corresponding to respective digital assets" (Madrande, column 63, lines 20-42);

"receiving continuous stream media data for one or more of the digital assets" (Madrande, column 64, video table);

Application/Control Number: 09/654,101

Art Unit: 2671

"processing the sets of data to extract particular information from the data, and writing the extracted information to a data file" (Madrande, column 66, video stream; column 15, lines 9-41); and

"assembling the digital assets, and the data in the data file into an executable file" (Madrande, column 76, video registering).

It is noted that Madrande does not explicitly teach "compressing the continuous stream media data". However, given a video file processing system such as Madrande (column 23, lines 45-56), it would have been obvious to compress the video data in a file because the compression of data helps to reduce the required memory for storing video data and enhance the processing efficiency.

Claim 2 adds into claim 1 "designating one of the files to be opened when the executable file is extract" which would have been obvious because such arrangement reduce the access time and enhance the process efficiency.

Claim 3, and similar claim 57, adds into claim 1 "time information" which Madrande teaches in column 24, lines 31-35.

Claims 4-6, and similar claims 37, 38, 58-60, add into claim 1 the data is received from "a disk, an author, and a communication network", respectively which Madrande teaches in col. 17, lines 25-34.

Claims 7-9, and similar claims 61-63, add into claim 1 the insertion of receiving data into "a compressed format selected by an author, screen slides, spread sheet" which would have been obvious because Madrande publishing web server can arrange the data in any well known forms for displaying in the screen.

Jhu Ngyn

Application/Control Number: 09/654,101

Art Unit: 2671

Claims 10-20, and similar claims 64-75, add into claim 1 the receiving, copying and/or extracting media data which Madrande suggests in column 27, line 8 to column 28, line 61.

Claims 21-35, and 39-55 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Phu K. Nguyen whose telephone number is (703)305 - 9796. The examiner can normally be reached on M-F 8:00-4:30.

The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306. Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
